

Geospatial Asset Management System

Maximize the value of your network assets!

Introducing an enterprise information management system specifically designed to meet the needs of the Telecom industry. Our Geospatial Asset Management System (GAMS) allows Telecom operators the ability to leverage the visualization power of software such as Google Earth for immediate enterprise-wide access to network assets, which enables:

- ✓ Higher revenue generation from increased responsiveness to sales or marketing initiatives
- ✓ Improved operational performance with fewer resources managing more assets
- ✓ Faster & better decisions to be made from actual network inventories or plans
- ✓ More cost-effective network planning for mergers, migrations, & growth
- ✓ Better & more cost-effective recovery planning for emergencies or disasters
- ✓ Centralized asset record-keeping & management for geographically diverse or even global networks
- ✓ More efficient information management for continuous improvement of asset details & accuracy
- ✓ Easier asset-based business case development, desktop engineering studies, & presentations
