

Terminal & Transmission Services

Telequity Group is one of the telecom industry's leaders in cost-effective and experienced terminal and transmission inside plant services. Telequity inside plant services includes a broad and comprehensive set of professional services that encompass the entire network lifecycle, including network Analysis & Design, Staging, Deployment & Integration, as well as Operations & Maintenance. An overview of each of these categories is provided below.

Analysis & Design

Designing the most cost-effective and flexible network begins with analysis of clients' business, service vision, operational environment and network architecture footprint. Based on this analysis, Telequity can assist with:

- ◆ Upgrade / New Deployment Feasibility
- ◆ Vendor Selection Process
- ◆ Site Surveys / Infrastructure Audits
- ◆ Plant characterization
- ◆ Interoperability & Integration
- ◆ Engineering and Design – Transport and Infrastructure

Staging, Deployment & Integration

Telequity provides a customized set of staging, deployment and integration options specific to the requirements of each project, such as:

- ◆ Supplier management & quality control functions
- ◆ Test program development, oversight and validation resources
- ◆ OSS/DCN/Synchronization integration
- ◆ Infrastructure Deployment – Power Plant, Building, HVAC, etc.
- ◆ Site implementation, including site acquisition and construction
- ◆ Equipment and site engineering
- ◆ Third-party vendor material sourcing and staging
- ◆ Installation and testing services

Operations & Maintenance

Telequity helps clients achieve simple and cost-effective maintenance support models, including:

- ◆ Remote and on-site maintenance support
- ◆ Spare parts management & inventory control
- ◆ Proactive and reactive maintenance support
- ◆ Operations set-up, support and readiness
- ◆ Disaster recovery process
- ◆ Managed network operations resources
- ◆ Managed field operations: On-site equipment actions and field services

For site implementation, site engineering, equipment installation, test and turn-up, multi-vendor network integration/interoperability, and quality audits for your existing or planned network, Telequity services portfolio allows for the creation of a customized set of integration and deployment services options specific to the requirements of each project.

At Telequity, we have an uncompromising commitment to serving our customers through de-

Telequity Partnership

monstrable results and exact execution. We serve our customers' needs by partnering with them, learning their business objectives, and then developing the most effective and efficient models with which to achieve their goals. We want to help you to achieve your goals.
